

Thermal Physics Section

2. Thermal physics	
2.1 Simple kinetic molecular model of matter	
2.1.1 States of matter <b>Core</b> <ul style="list-style-type: none"> <li>State the distinguishing properties of solids, liquids and gases</li> </ul>	
2.1.2 Molecular model <b>Core</b> <ul style="list-style-type: none"> <li>Describe qualitatively the molecular structure of solids, liquids and gases in terms of the arrangement, separation and motion of the molecules</li> <li>Interpret the temperature of a gas in terms of the motion of its molecules</li> <li>Describe qualitatively the pressure of a gas in terms of the motion of its molecules</li> <li>Show an understanding of the random motion of particles in a suspension as evidence for the kinetic molecular model of matter</li> <li>Describe this motion (sometimes known as Brownian motion) in terms of random molecular bombardment</li> </ul>	<b>Supplement</b> <ul style="list-style-type: none"> <li>Relate the properties of solids, liquids and gases to the forces and distances between molecules and to the motion of the molecules</li> <li>Explain pressure in terms of the change of momentum of the particles striking the walls creating a force</li> <li>Show an appreciation that massive particles may be moved by light, fast-moving molecules</li> </ul>
2.1.3 Evaporation <b>Core</b> <ul style="list-style-type: none"> <li>Describe evaporation in terms of the escape of more-energetic molecules from the surface of a liquid</li> <li>Relate evaporation to the consequent cooling of the liquid</li> </ul>	<b>Supplement</b> <ul style="list-style-type: none"> <li>Demonstrate an understanding of how temperature, surface area and draught over a surface influence evaporation</li> <li>Explain the cooling of a body in contact with an evaporating liquid</li> </ul>
2.1.4 Pressure changes <b>Core</b> <ul style="list-style-type: none"> <li>Describe qualitatively, in terms of molecules, the effect on the pressure of a gas of:                             <ul style="list-style-type: none"> <li>a change of temperature at constant volume</li> <li>a change of volume at constant temperature</li> </ul> </li> </ul>	<b>Supplement</b> <ul style="list-style-type: none"> <li>Recall and use the equation <math>pV = \text{constant}</math> for a fixed mass of gas at constant temperature</li> </ul>

<p>2.2 Thermal properties and temperature</p>	
<p>2.2.1 Thermal expansion of solids, liquids and gases</p> <p><b>Core</b></p> <ul style="list-style-type: none"> <li>Describe qualitatively the thermal expansion of solids, liquids, and gases at constant pressure</li> <li>Identify and explain some of the everyday applications and consequences of thermal expansion</li> </ul>	<p><b>Supplement</b></p> <ul style="list-style-type: none"> <li>Explain, in terms of the motion and arrangement of molecules, the relative order of the magnitude of the expansion of solids, liquids and gases</li> </ul>
<p>2.2.2 Measurement of temperature</p> <p><b>Core</b></p> <ul style="list-style-type: none"> <li>Appreciate how a physical property that varies with temperature may be used for the measurement of temperature, and state examples of such properties</li> <li>Recognise the need for and identify fixed points</li> <li>Describe and explain the structure and action of liquid-in-glass thermometers</li> </ul>	<p><b>Supplement</b></p> <ul style="list-style-type: none"> <li>Demonstrate understanding of sensitivity, range and linearity</li> <li>Describe the structure of a thermocouple and show understanding of its use as a thermometer for measuring high temperatures and those that vary rapidly</li> <li>Describe and explain how the structure of a liquid-in-glass thermometer relates to its sensitivity, range and linearity</li> </ul>
<p>2.2.3 Thermal capacity (heat capacity)</p> <p><b>Core</b></p> <ul style="list-style-type: none"> <li>Relate a rise in the temperature of a body to an increase in its internal energy</li> <li>Show an understanding of what is meant by the thermal capacity of a body</li> </ul>	<p><b>Supplement</b></p> <ul style="list-style-type: none"> <li>Give a simple molecular account of an increase in internal energy</li> <li>Recall and use the equation thermal capacity = <math>mc</math></li> <li>Define specific heat capacity</li> <li>Describe an experiment to measure the specific heat capacity of a substance</li> <li>Recall and use the equation change in energy = <math>mc\Delta T</math></li> </ul>
<p>2.2.4 Melting and boiling</p> <p><b>Core</b></p> <ul style="list-style-type: none"> <li>Describe melting and boiling in terms of energy input without a change in temperature</li> <li>State the meaning of melting point and boiling point</li> <li>Describe condensation and solidification in terms of molecules</li> </ul>	<p><b>Supplement</b></p> <ul style="list-style-type: none"> <li>Distinguish between boiling and evaporation</li> <li>Use the terms latent heat of vaporisation and latent heat of fusion and give a molecular interpretation of latent heat</li> <li>Define specific latent heat</li> <li>Describe an experiment to measure specific latent heats for steam and for ice</li> <li>Recall and use the equation energy = <math>ml</math></li> </ul>

2.3 Thermal processes	
<p>2.3.1 Conduction</p> <p><b>Core</b></p> <ul style="list-style-type: none"> <li>Describe experiments to demonstrate the properties of good and bad thermal conductors</li> </ul>	<p><b>Supplement</b></p> <ul style="list-style-type: none"> <li>Give a simple molecular account of conduction in solids including lattice vibration and transfer by electrons</li> </ul>
<p>2.3.2 Convection</p> <p><b>Core</b></p> <ul style="list-style-type: none"> <li>Recognise convection as an important method of thermal transfer in fluids</li> <li>Relate convection in fluids to density changes and describe experiments to illustrate convection</li> </ul>	
<p>2.3.3 Radiation</p> <p><b>Core</b></p> <ul style="list-style-type: none"> <li>Identify infra-red radiation as part of the electromagnetic spectrum</li> <li>Recognise that thermal energy transfer by radiation does not require a medium</li> <li>Describe the effect of surface colour (black or white) and texture (dull or shiny) on the emission, absorption and reflection of radiation</li> </ul>	<p><b>Supplement</b></p> <ul style="list-style-type: none"> <li>Describe experiments to show the properties of good and bad emitters and good and bad absorbers of infra-red radiation</li> <li>Show understanding that the amount of radiation emitted also depends on the surface temperature and surface area of a body</li> </ul>
<p>2.3.4 Consequences of energy transfer</p> <p><b>Core</b></p> <ul style="list-style-type: none"> <li>Identify and explain some of the everyday applications and consequences of conduction, convection and radiation</li> </ul>
